

# Calibrations

## NMi maintains the calibration of your measuring instruments

The quality and safety of your product(ion) is dependent on the quality of the internal and/or external service and support organisation. By using the services of NMi, any delay in the time for calibration and/or incorrect calibrations will be a thing of the past.

### Service package

NMi offers a complete solution to control your measuring instruments. NMi will, if necessary, take complete control and care of your measuring instruments and will ensure that you always have calibrated equipment. The extensive service package enables us to calibrate the majority of your measuring instruments on-site, do adjustments, maintenance and, if necessary, repairs. If the calibration cannot be done in one of our seven laboratories or on-site, we can source these services from selected partners. These partners will be selected on the quality, trustworthiness, market conformity and time to completion of their service.

### NMi do calibrations for the following:

- Electrical measuring instruments like:
  - multimeters, clamp-on current meters, safety testers
  - high frequency measuring instruments
  - sound level meters
- Geometric measuring instruments like:
  - verniers
  - thread plug gauges
  - altimeters
- Pressure and temperature sensors and transmitters
- Force sensors, torque wrenches, crimping pliers
- Level meters
- Gas- and liquid meters, flow computers (fiscal metering)
- Light meters
- Relative humidity meters
- Gas chromatographs
- Weighing scales

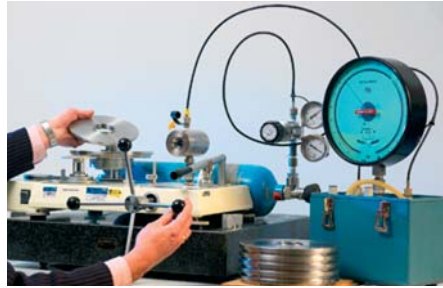

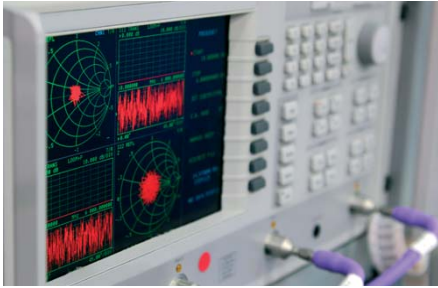

If your measuring equipment is not listed above or if you have other questions about the services offered by NMi then please contact our calibration department on 074 250 34 44 or email us on [kalibraties@nmi.nl](mailto:kalibraties@nmi.nl).

### Management contract

With NMI controlling your measuring equipment the benefits are as follows:

- No more concerns about planning for calibration or recalibration.
- Less operational contact with suppliers leaving you more time to perform your main tasks.
- Software update maintenance for your digital measurement devices.
- Comprehensive reports of available measurement equipment
- Less creditors to control.
- Attractive calibration tariffs.

### Calibration management system

The calibration management system from NMI enables you to have the calibration of all your measurement equipment under control. You have access to the system over the Internet. It contains the following information:

- Total overview into all aspects of your measuring devices, the calibration dates, the certification per department or factory.
- Latest reports available online.
- Easy to change calibration frequencies (e.g. shortening or lengthening of the calibration frequency).
- Historical reports available for five years.
- Annual reports on CD-ROM
- Sorting and importing of Internet data to your own database system.
- Request for recalibration via the website.

The contract also covers on-site monitoring of your measurement instruments. It also covers the collecting and returning of these instruments. We use specialised transport specially equipped to deal with your valuable and sensitive equipment.

## EuroLoop

### Fiscal metering

In addition to the calibration of standard measuring devices like multimeters, testers and analysers, NMI also has a unique calibration facility for the calibration of gas- and flowmeters – EuroLoop.

EuroLoop will be *the* research and test facility for technologies and products for the measurement of gas and oil on a industrial scale.

### Activities

- Calibration, verification and type approval of industrial flow meters (oil and gas).
- Industrial research (process technology and flow).
- Educating and training at MBO and HBO level.

### EuroLoop consists of the following sections:

- A facility for industrial flow meters (HyCal)
- A facility for industrial gas-meters (GasCal)
- Control room and meeting rooms
- Training centre
